

TYPES OF OPTIONS & OPTION CHAIN ANALYSIS

Types of option contracts (moneyness of option contracts)

1. ATM At the Money
 2. ITM In the Money
 3. OTM Out of the Money
- Current Market Price (CMP) of underlying asset (here in this case, NIFTY is 25694)

- **For CE: Nifty CE Moneyness Table (Spot ₹25,694)**

- Strike Price closest to the CMP is called ATM (25700)

All Strike Price above CMP is called OTM (25750, 25800, 25850)

All Strike Price below CMP is called ITM (26550, 26600, 26650,.....)

Strike	Moneyness
25,500	ITM
25,550	ITM
25,600	ITM
25,650	ITM
25,700	ATM
25,750	OTM
25,800	OTM
25,850	OTM
25,900	OTM

The ATM, ITM and OTM keeps shifting as per the above, depending upon the CMP.

- **For PE: Nifty PE Moneyness Table (Spot ₹25,694)**

Strike Price closest to the CMP is called ATM (25700)

All Strike Price below CMP is called OTM (26550, 26600, 26650)

All Strike Price above CMP is called ITM (25750, 25800, 25850)

Strike	Moneyness
25,500	OTM
25,550	OTM
25,600	OTM
25,650	OTM
25,700	ATM
25,750	ITM
25,800	ITM
25,850	ITM
25,900	ITM

The ATM, ITM and OTM keeps shifting as per the above, depending upon the CMP.

Option Chain

Option chain is a table listing all available CALL and PUT option contracts for a specific underlying (Nifty/Stock) organized by strike price and expiry date.

Shows:

- Strike prices
- Premium , LTP (Bid/Ask prices)
- Bid/Ask quantities
- Open Interest
- Volume
- Implied Volatility

Purpose: Complete market view for one underlying - helps choose the right strike price for trading.

Decoding The Above Data

- On the left side of the data table, all the CALL (CE) options are shown, and on the right side, all the PUT (PE) options are shown.
- There are two different shades on both sides, and these shades are inverted for calls and puts. One area is plain white, and the other is shaded.

For both CE and PE:

- The shaded area indicates ITM (In the Money)
- The white area indicates OTM (Out of the Money)
- The area where the shade changes represents the CMP (Current Market Price) of the underlying asset.
- In a live market, this data keeps refreshing and changing based on the current CMP of the underlying asset.

- The premium (value/price) of an option increases as you move towards ITM and decreases as you move towards OTM. As a result, both the profit potential and the risk are higher in ITM options, and they increase further as you go deeper ITM.
- To avoid taking huge risk, it is usually better to buy contracts that are at the money (ATM).
- ITM contracts carry a high premium, and both the potential for profit and the risk of loss are high.

Option Chain – Key Terminologies

- Bid Qty: Quantity that buyers want to buy.
- Bid Price: Price at which buyers are ready to buy.
- Ask Qty: Quantity that sellers are offering (supplying).
- Ask Price: Price at which sellers are ready to sell.
- OI (Open Interest): Total number of outstanding contracts that are not yet squared off.
- Change in OI: Change in open interest compared to the previous day.
- Volume: Total number of contracts traded during the day.

Option Chain – Key Terminologies

- IV (Implied Volatility): Market's expectation of how much the price of the underlying may move.
- LTP (Last Traded Price): The last price at which the option was traded.

Option Buying vs Option Selling – Risk

- In Option Buying, the maximum loss is limited to the premium paid (amount invested). Example: If a contract is bought for ₹200, the maximum it can fall is to ₹0, so the maximum loss = ₹200.
- In Option Selling (Writing), the maximum loss is theoretically unlimited, because the stock price can move up without any limit.
- If the same option is sold for ₹200 and the stock price keeps moving up, the loss can keep increasing until the margin is fully used, or the position is closed with a loss.

Option Buying vs Option Selling

Aspect	Buying Options	Selling Options
MARGIN	Premium only	High margin
Win Rate	Low (30-40%)	High (60-90%)
Max Loss	Limited (premium)	Unlimited
Max Profit	Unlimited	Limited (premium)

THANK YOU
