# CISD (Change in the State of Delivery)

## What is Change in the State of Delivery…?

Change in the state of delivery basically means the change in the direction of
price delivery, for instance if price was being delivered to the buy-side initially
now after an CISD price is going to be delivered to the sell-side
You can see an example of CISD in the picture below:

# How to Spot an CISD on the Chart?

1 - Bullish CISD.

A bullish change in the state of delivery is indicated by the closing of price
above the opening price of bearish price delivery. It indicates loss of
selling momentum and could be a sign of reversal.
A bearish price delivery can be seen with a single bearish candle or the
consecutive series of bearish candles.

## 2 .Bearish ICT CISD

A bearish change in the state of delivery is indicated by the closing of price below the opening price of bullish price delivery. It indicates a loss of buying momentum and could be a sign of reversal.A bullish price delivery can be seen with a single bullish candle or the consecutive
series of bullish candles.
